Profile

Developing software in close contact with end users is still an absolute joy for me. Working in a niche market makes it incredibly fun, allowing me to use my creativity and problem-solving abilities to find solutions that cannot so easily be picked from the shelf. Although working individually from time to time, I prefer working in teams with like-minded people, sharing knowledge and ideas, while improving the software and each other.

I am eager to learn new things and always invest time at home to familiarize myself with new technologies and paradigms.

Experience

2019 - present

Groningen

Front- and backend developer at Maccs International BV (Vista Group). Working on our (AWS) cloud-based solution for theatrical distribution called Mica (www.mica.co), developed using Java (spring-boot) and MariaDB. In an agile environment (continuous delivery) I, and we as a team, interact closely with each other and our end-users to quickly respond to the needs of our customers. My years of experience in developing ERP solutions helps the team in making decisions on database and code architecture.

2010 - 2019

Ubbena / Groningen

(Lead) Senior developer at Maccs International B.V. (Transparant Constructions). Working on our main product MACCS (www.maccs.com), a desktop application for theatrical distribution (planning, order, sales, logistics, finance) using PowerScript (PowerBuilder) and Oracle, I took lead of the majority of projects funded by Warner Bros and Paramount. I trained and coached colleagues in the Netherlands and abroad, as well as end-users on-site during deployments. In the Netherlands and abroad (mainly Europe). At the end of 2014, I decided to combine work with going back to University to get my Master's degree, while learning more on service oriented architectures and Internet security. Eventually I moved on to a new project, at which time I had transferred my knowledge to the newscrum teams ((lead) developers/ product owners) to ease my leave.

2006 - 2010

Ubbena

Junior software developer at ADG Applications (Transparant Constructions). With a Java background (college), in this period I learned to work with Powerbuilder and Oracle, give demos to potential customers, deploy MACCS in various countries and train end users. I successfully implemented a pilot project for Paramount in Spain (Madrid), getting Paramount aboard for deployment of MACCS in multiple territories.

2002 - 2006

Roden

Fresh out of school, I started at a tax advice agency called Slenema & Co. As the only tech-savvy employee I took care of the network infrastructure and application management. In this period I got some certificates in accounting (LOI Praktijkdiploma Boekhouden (2004) / LOI Moderne Bedrijfsadministratie (2006)). In this period I developed a time-registration tool in Visual Basic for Applications.

Education

2015 - 2019

Master of Science - Software Engineering (Cum Laude)
Open University Netherlands

1998 - 2002

Bachelor of Science - Software Engineering
Hanze University of Applied Sciences / Hanzehogeschool Groningen

Skills / Proficiencies

Languages

- Java (Spring Boot, Hibernate, Wicket, Maven, Git, Tomcat)

Advanced

- Typescript (Angular 2), HTML, CSS, Bootstrap

Intermediate

Relational Databases

- Oracle, MySQL, MariaDB

Advanced

IDE

- Eclipse, IntelliJ, Android Studio

Operating Systems

- Windows / Linux (A)

Languages

Dutch

Superior

English

Advanced
